Android 流動電話系統程式編寫入門　　　　　　　　　**122-179779-01**
Introduction to Android Mobile Application Programming

Android is one of the most popular mobile phone platforms nowadays. It is an open-source package that comes along with many ready-used components for easy development on mobile applications using Java language. This course aims at providing introduction to Android software development kit (SDK) and the basic procedures on creating mobile applications that can run in the Android platform. Topics includes: 1) Introduction of Android platform: 2) Installation of Android SDK and related packages; 3) IDE of Android SDK; 4) Android application structure; 5) Discussion on sample Android codes; 6) Developing simple Android application.

Participants are expected to have PC, Windows and Internet operations. Prior knowledge in design and programming will be advantageous too.
